Education

Texas A&M University, BS in Computer Science, Minor in Statistics — August 2024 – May 2028

- GPA: 3.9/4.0
- **Coursework:** Data Structures and Algorithms, Discrete Structures, Computer Languages, Computer Organization, Computer Systems, Machine Learning, Software Engineering, Linear Algebra, Statistics

Technical Skills

- **Languages:** Python, C++, JavaScript, TypeScript, Java, Haskell, HTML, CSS, Latex, Markdown
- **Technologies:** React Native, Supabase, Git, PyTorch, NumPy, Expo, scikit-learn, Flask, Pandas, Matplotlib

Experience

Software Engineer & Co Founder, Chaser by WNDR — September 2025 – Present

- Built and shipped **Chaser**, a full-stack **TypeScript/React Native (Expo)** rewards platform that grew **4× last month** to serve **500+ users** across **5** Texas bars.
- Implemented core features including **product redemption**, **bar onboarding**, **friends network** and **check-in geofencing**.
- Architected backend on **Supabase (PostgreSQL)**: schema design and **SQL**, **Row Level Security (RLS)** policies, **database triggers**, and over **15** serverless **Edge Functions (Deno)** with **cron jobs** for automation and analytics.
- Supported **go-to-market** and **B2B** growth by pitching to local bar partners, organizing campus events and creating **branded merchandise** to increase awareness.

Machine Learning Research Assistant , Texas A&M University — May 2024 – Present

- Developed a physics-informed Gaussian-process framework benchmarked across 200 independent runs and approximately **41,000** candidate alloys, reducing average time-to-first-feasible discovery by **50%** while satisfying **5** simultaneous material constraints.
- Created a derivative-informed Gaussian-process framework that found rare single-phase alloys in $\leq$**18 CALPHAD queries**, **99.5% fewer** than exhaustive search across **100 campaigns**.
- Lead author of *"Good Enough is Better: Feasibility vs. Pareto-Optimality in Alloy Design"*, published in Digital Discovery (2026).
- Lead author of *"Residual Driving Force Minimization Enables Efficient Discovery of Single-Phase Alloy Regions"*, under review at Acta Materialia and presented at **CALPHAD 2026** in Quebec

Projects

Caffeine Critique | Python, HTML, CSS

- Built a **Flask** web application that scrapes coffee ratings from **Obsidian** notes and uses an optimized **mixed Gaussian Process** to predict ratings from categorical and continuous drink attributes.

Extracurricular

Aggie Coding Club | Chaser Project Manager — January 2026 – May 2026

- Led and mentored **6 developers** building for **Chaser**, teaching full-stack development with **TypeScript**, **React Native**, **Supabase**, **PostgreSQL/SQL**, Git, and an isolated **AWS** development environment.
- Managed the design, implementation, deployment, and semester-long maintenance of a **bottle-service queue feature**, guiding frontend-backend integration, database design, and testing.

Alpha Tau Omega Fraternity | Website Designer, Rush Chair, Scholarship Chair — August 2024 – Present

- Designed and maintained the fraternity website to enhance usability and branding for recruitment and alumni.
- Recruited over **50** new members and coordinated events, outreach, and committee operations as Rush Chair.
